QOMPLX defends apex controls – identity and privilege

Challenge

1.
One of the world's leading trading and investment firms needed a unified defense platform to protect its core assets: intellectual property and customer data

2.
With QOMPLX Identity Assurance and Privilege Assurance, the client can visualize its entire network and has a continuous real-time understanding of its connected assets

Amid increasing cyber threats and mounting regulatory compliance pressure, a leading trading and investment firm needed a unified defense platform to protect its core assets: intellectual property, customer data, and operations integrity.

The cost-effective, streamlined platform had to include:

- Asset management, identification, and enumeration
- Vulnerability management
- Active Directory and Kerberos authentication security
- User behavior analytics
- Data loss prevention
- Machine learning proficiency
- Incident response expertise

After evaluating several cyber SaaS managed security services providers and managed detection and response companies, the solution was clear: QOMPLX

INDUSTRY:	Finance & insurance
HEADQUARTERS:	North America
EMPLOYEES:	~100
OFFICES:	North America
SELECT SERVICES:	Asset management
ANNUAL REVENUE:	USD millions

Solution

Backed by the QOMPLX Managed Detection & Response solution, the client now has the operational team and unified defense platform needed to visualize its network with continuous real-time understanding of its connected assets.

The QOMPLX complimentary VCISO advisory service provided the on-demand strategy and expertise necessary to comply with various regulations while also developing and implementing policies, procedures, and programs for enterprise-wide cybersecurity management.

QOMPLX helped the client develop, deploy, and integrate a state-of-the-art incident response program to identify, categorize, and respond to incidents.

Impact

The client's internal operations team can collaborate with security professionals and dynamically interrogate assets to determine which systems and processes are running—a key capability for effective threat hunting and investigation activities.

Armed with a QOMPLX-unique Kerberos protocol monitoring and authentication validation, the client has comprehensive identity assurance coverage and confidence that any forged Golden or Silver Ticket activity will be deterministically detected in seconds. They also rest assured that attacks involving rogue DCs (e.g. DCSync or DCShadow) will be thwarted.

Identity secured. Logs handled.
Hunting operationalized.
Confidence restored.

Why QOMPLX®

QOMPLX harnesses data to provide unified visibility into cyber risks and trust in identity. QOMPLX solutions reduce cyber risk and attack surfaces by mapping exposures and performing real-time detection of attacks. This approach increases network observability by closing the largest remaining gaps in cybersecurity: identity verification, cross-tool data fusion, and data interoperability. QOMPLX defends some of the world's most renowned brands by re-establishing trust for client organizations, assuring authentication, and enabling confident security decisions.
