QOMPLX:

Raising the bar

IP law firm cuts costs, secures more with QOMPLX

1.

As a legal services firm that serves information-sensitive industries, the client feared that they hadn't sufficiently protected themselves from the techniques that attackers often use in Ransomware and Supply Chain attacks.

2.

With QOMPLX's Privilege Assurance and Identity Assurance solutions protecting their firm, the client was able to start identifying and mitigating its biggest, client-oriented risks in just days.

Challenge

When your business is intellectual property, you know how important it is to protect your sensitive data. That's why, when one global law firm needed to fortify their security stack, they chose QOMPLX.

As a legal services firm that serves information-sensitive industries, the client has long considered protecting client data a top priority.

While the law firm had perimeter-based protections, network monitoring, and logging in place (via managed service providers), their executive team feared that they hadn't sufficiently protected themselves from the techniques that attackers often use in Ransomware and Supply Chain attacks: lateral movement and privilege escalation techniques.

Penetration tests showed more was needed.

INDUSTRY:	Professional, Scientific, and Technical Services
HEADQUARTERS:	North America
EMPLOYEES:	100+
OFFICES:	North America
SELECT SERVICES:	Intellectual Property
ANNUAL REVENUE:	USD Millions

Solution

In just days, to help the firm identify and stop ransomware and supply chain attacks before a data disaster occurs, the QOMPLX team:

- Used QOMPLX's Privilege Assurance software to map the firm's critical Active Directory infrastructure and identify vulnerabilities that needed immediate repair
- Installed QOMPLX's Identity Assurance software on all networked domain controllers, to validate that each user who requests access to their network is who they say they are, all of the time
- Integrated alerting capabilities into the firm's Managed-Security-Service-Provider's (MSSP's) workflows including feeds to downstream SIEM tools

Impact

With QOMPLX's Privilege Assurance and Identity Assurance software solutions protecting their firm, the client was able to start identifying and mitigating its biggest, client-oriented risks in just days. And, just six months after they retained QOMPLX, the client purchased QOMPLX's Managed Assurance service to monitor and triage security alerts flagged by their security stack.

QOMPLX's suite of solutions – Identity Assurance, Privilege Assurance, and Managed Assurance – monitor hundreds of thousands of events for the client each day, but these alerts are prioritized so the client is only alerted to the most critical activities that require their attention.

> With QOMPLX, the client can focus on their key business objectives knowing that their sensitive information on their hundreds of servers are monitored and protected 24 hours a day, every day

Why QOMPLX®
QOMPLX is the cloud-native leader in risk analytics. We help organizations around the world make intelligent business decisions and better manage risk through our advanced, proprietary risk cloud. We are the leaders at rapidly ingesting, transforming, and contextualizing large, complex, and disparate data sources through our data factory in order to help organizations better quantify, model, and predict risk in areas including cybersecurity, insurance, and finance. For more information, visit **qomplx.com** and follow us **@QOMPLX**.
