

Managed Assurance (MA)

Scan, monitor, and respond in real-time with unmatched expertise from QOMPLX

Real-time detections and response

QOMPLX:CYBER

Our experts manage Q:CYBER SaaS solutions to support your team 24x7

- Q:CYBER SaaS suite is built up on the QOMPLX data factory that enable QOMPLX experts to support both your internal and perimeter security. Our experts deploy their in-depth knowledge of these QOMPLX solutions to help you get the most out of your investment
- Q:CYBER SaaS suite uses patented, real-time detections and generates categorized findings from informational to critical and our 24x7 security monitoring fills in the gaps that only human experts can.

Powerful Q:CYBER SaaS solutions eliminate noise to deliver clear signals

Clear signals are the cornerstone of reliable insights.

- The QOMPLX Managed Assurance team of experts employ the continuous analytic engine from our data factory which powers the Q:CYBER SaaS suite of Identity Assurance, Privilege Assurance, and Q:SCAN
- **Q:SCAN** enables attack surface monitoring and management to identify key security exposures
- **Privilege Assurance** monitors Active Directory risks that threat actors could leverage in the event of breach
- **Identity Assurance** employs unparalleled real-time detections for attacks on Active Directory and critical infrastructure.

Detection	QOMPLX MDR employs the Q: CYBER SaaS Suite
Identity Assurance automatic, real-time detections	QOMPLX Identity Assurance delivers the most powerful, patented, deterministic, identity-based detections in the industry... we don't guess with heuristics (like our competitors), we know when the most critical lateral movement and privilege escalation attacks are executed.
Identity Assurance heuristic detections	QOMPLX Identity Assurance delivers a range of heuristic detections that augment our deterministic detections to provide more clarity to our response team in regard to attacks.
Identity Assurance rule builder	QOMPLX flagship Identity Assurance solution offers never before seen flexibility to tailor detections to your organization's environment and signals, offering custom rule creation that fits your organization like a glove.
QOMPLX enrichment data	QOMPLX leverages both public and proprietary enrichment data to increase the accuracy and efficacy of our detections and insights.
Privilege Assurance privilege access management	Our experts help your team execute against a "least privilege" approach to privilege access management through proprietary blast radius visualization among other insights.
Attack surface detections	QOMPLX experts identify and help you secure your attack surface with the aid of signals from Q:SCAN, our proprietary attack surface management solution.

QOMPLX:CYBER

Insight-powered alerts allow for real-time response

- QOMPLX Managed Assurance relies on powerful software and expert implementation for full-service deployment and monitoring
- Gain agility with our SOC that powers a better cybersecurity response.

Response	QOMPLX Analyst Resources
Incident validation / notification	<p>QOMPLX SOC personnel will provide confirmed evidence from available sources to confirm if an incident has occurred.</p> <p>Notification of an incident will be based on customized Incident Response Playbooks for the incident identified. Phone, email, text, and/or other communications will be utilized to notify the client.</p> <p>All investigation results will be available via the Incident Investigation in Q:CYBER. SOC personnel are also available to provide ongoing support for analysis of aggregated data in Q:CYBER.</p>
Remote response	<p>QOMPLX SOC personnel are trained to provide guidance for containment, investigative, and mitigation/remediation steps for most incidents.</p> <p>Clear and concise communications are provided to ensure effective and immediate response directions.</p>
Incident timeline reporting	<p>Thorough documentation of all steps performed and evidence collected are contained with the Q:CYBER portal.</p>
Threat mitigation recommendations	<p>During the incident, QOMPLX will analyze all evidence to provide guidance on performing active and ongoing mitigation of the current activity, but also for other threats that may exist due to weaknesses/vulnerabilities found during the investigation.</p>

Why QOMPLX®

QOMPLX harnesses data to provide unified visibility into cyber risks and trust in identity. QOMPLX solutions reduce cyber risk and attack surfaces by mapping exposures and performing real-time detection of attacks. This approach increases network observability by closing the largest remaining gaps in cybersecurity: identity verification, cross-tool data fusion, and data interoperability. QOMPLX defends some of the world's most renowned brands by re-establishing trust for client organizations, assuring authentication, and enabling confident security decisions.
